SUMMARY

Software Engineering graduate with 3 months of internship experience at FPT Academy, mainly working with Java and Spring Boot. Through my internship and university projects, I have gained experience in backend development, working with databases, building APIs, and implementing business requirements. I am interested in AI because I want to learn how intelligent technologies and algorithms can be used to solve practical problems. I hope to develop these skills through the AI Practical Training Program.

EXPERIENCE

Software Engineer Intern — FPT Academy

May 2025 - Aug 2025

- Learned and practiced backend development using Java and Spring Boot through assigned projects and exercises during the internship.
- Worked with REST APIs, databases, and Spring Data JPA to implement backend functions.
- Worked with team members to develop, test, and improve project features.

PROJECT

FastFood E-commerce Platform

May 2025 - Aug 2025

Internship Project | Full-stack

- Built backend features for products, cart, orders, users using Java and Spring Boot.
- Worked with Spring Security to handle login, user roles, and OAuth2 authentication.
- Used Spring Data JPA and MySQL to manage application data and integrated VNPAY for online payment.

Project stack: Java, Spring Boot, Spring Data JPA, MySQL, Spring Security, OAuth2, VNPAY.

Inbox Triage Agent – AI Email Assistant

Personal project

- Built an AI-powered email assistant using FastAPI and LLM function calling to classify and summarize Gmail emails into four priority categories.
- Implemented a hybrid AI + rule-based fallback mechanism to handle LLM failures and rate-limit events.
- Integrated Gmail and Google Calendar APIs with OAuth 2.0 to generate reply drafts and create deadline/appointment events automatically.

Project stack: Python (FastAPI), Next.js (TypeScript), Groq/Gemini API, Google OAuth 2.0, Gmail & Calendar API, SQLite

IELTS Learning & Management System

May 2026 - Aug 2026

Graduation project | Full-stack | Team size: 5

A web-based learning management system for managing courses, classes, learning materials, examinations, users, and other academic activities.

- Course management: developed backend services for managing courses and related information using ASP.NET Core and Entity Framework Core.
- Learning material management: developed functions for managing and organizing learning materials within courses.
- User & parent management: developed backend services for user and parent management and related business logic.
- Scheduling collaboration: participated in team discussions and provided input on scheduling constraints used in the Google OR-Tools CP-SAT module, including teachers, rooms, time slots, availability, and conflicts.

Project stack: ASP.NET Core, Entity Framework Core, SQL Server, Google OR-Tools.

EDUCATION

Bachelor of Software Engineering

2022 - 2026

FPT UNIVERSITY

- GPA: 3.0/4.0

KEY SKILLS

Languages: Java, Python, JavaScript/TypeScript, C#

Backend: Spring Boot, Node.js, FastAPI, ASP.NET Core, REST APIs

Frontend: React, Next.js, Tailwind CSS

Database: MySQL, SQL Server, SQLite

Tools: Git, GitHub
